NOTES:

- Approach names are abbreviations of directional movement (e.g. NBL = northbound left-turn movement)
- Actuated - The lanes for this movement have vehicle detectors for placing vehicle calls for service (the detector may or may not have a unique detector input to the traffic controller).
- Counted - The vehicle detectors for each lane have unique detector inputs to the traffic controller (If "YES", vehicle counts can occur).
- SHARED - The detector(s) are prior to the start of this movement's lane so it is combined with the thru movement
- * Movement has detector(s) but tied to the thru movement
- Note: Actuated = **YES** with Counted = **NO**, means the intersection has the potential for performing traffic counts.
- Autoscope video detection may have inaccuracies due to camera orientation, detector setup, and seasonal factors.
